Primary Pain Theme

Delivery

Problem Statement (raw)

From August 2024 - March 2025, there were 52% of cases of differences in incoming Granule 238 (BGZ) data between physical and SAP data. which results in the TECO production process being hampered and the waste in the planning process because it has to check the actual physical stock in the field every day.

Goal (raw, optional)

Decreasing percent of cases of differences in data on incoming Granule 238 (BGZ) between physical and SAP to 10% starting November 2026.

DEFINE — project_003

- Project Name: project_003_SAP reliability
- Industry / Area / Theme: Manufacturing / Supply Chain / Delivery

Problem

From August 2024 - March 2025, there were 52% of cases of differences in incoming Granule 238 (BGZ) data between physical and SAP data, resulting in the TECO production process being hampered and waste in the planning process due to daily physical stock checks.

Goal

Decrease the percentage of cases of differences in data on incoming Granule 238 (BGZ) between physical and SAP to 10% by November 2026.

Business Case

Improving data accuracy between physical and SAP will enhance the efficiency of the TECO production process, reduce waste in planning, and minimize the need for daily physical stock checks, leading to increased productivity and cost savings.

Physical Stock with SAP is different

Key Issue / Context (optional)

> ☒ DEFINE Gate Evidence (Stage Gate)

Feedback for next draft (optional)

Scope

In Scope:

- Entire supply chain process from order receipt to final delivery
- Identification of bottlenecks and inefficiencies affecting delivery timelines

Out of Scope:

- Supplier management outside of delivery impact
- Non-logistics related customer service issues

CTQ

- **Data Accuracy Rate** (Percentage of accurate data entries %): The percentage of accurate data entries between physical stock and SAP records.
- **TECO Process Efficiency** (Time taken for TECO process hours): The time taken to complete the TECO production process without delays.

Y Variable

- On-time delivery rate

Risk & Type

- Risk Level: Medium
- Project Type: Process Improvement

Agent Insight

DEFINE Gate Status: FAILED

- DEFINE gate FAILED. Fix critical items (A-rules) before proceeding.

Strengths

- Problem statement is documented.
- Goal statement is documented.
- SIPOC is provided.
- CTQ/CTB list is provided.

Gaps

- Project charter is not confirmed (missing user confirmation).
- Problem statement is not SMART enough (measurable/time-bound missing).
- Goal statement is not SMART enough (measurable/time-bound missing).
- High-level benefit estimate is missing.

What to fix next (ordered)

1. Confirm project charter setup (checkbox) before finalize.
2. Rewrite problem statement with measurable indicator and timeframe.
3. Rewrite goal statement with numeric target and deadline.
4. Add benefit estimate (type + order of magnitude).

Risks if proceed

- Proceeding without fixing critical gate items will invalidate later phases.
