Problem Statement (raw)

Shipment from BU FM ID to Origin Port in Indonesia.
This is a problem if extra charges always occur when delivering the cargos from above warehouses to origin port.
In this case, Clariant should pay more

Goal (raw, optional)

Reduce shipments that face extra charges in inland transportation from 27.61 % to max 3% shipments by end Dec 2018

DEFINE — project_005

- Project Name:** Reduce Extra Charges of Inland Transportation in Export Shipments
- Industry / Area / Theme:** Manufacturing / Supply Chain / Cost

Problem

In BU FM ID, Clariant has warehouses to store the Finished Goods, located in Puninar, Cileungsi, and Tangerang. Since January 2018, there have been numerous extra charges for inland transportation for export shipments from BU FM ID to the Origin Port in Indonesia. This issue arises when extra charges consistently occur during cargo deliveries from these warehouses to the origin port. In April to July 2018, 27.61% of shipments incurred extra charges totaling IDR 427,359,100.00 (USD 30,525.65).

Goal

Reduce shipments that face extra charges in inland transportation from 27.61% to a maximum of 3% by the end of December 2018.

Business Case

Reducing extra charges in inland transportation will significantly decrease costs associated with export shipments, improving overall profitability and operational efficiency for Clariant.

Scope

In Scope:

Feedback for next draft (optional)

 Generate / Update Draft

- Inland transportation processes from warehouses to origin port
- Cost analysis of transportation expenses
- Engagement with stakeholders from procurement, logistics, and finance

Out of Scope:

- International shipping processes beyond the origin port
- Warehousing operations unrelated to transportation costs

CTQ

- **Inland Transportation Cost** (Cost IDR/USD): The total cost incurred for inland transportation of export shipments from warehouses to the origin port.
- **Percentage of Shipments with Extra Charges** (Percentage %): The percentage of shipments that incur extra charges during inland transportation.

Y Variable

- Total supply chain cost per unit or cost savings percentage in the supply chain process.

Risk & Type

- **Risk Level:** Medium
- **Project Type:** Process Improvement

Agent Insight

DEFINE Gate Status: FAILED

- DEFINE gate FAILED. Fix critical items (A-rules) before proceeding.

Strengths

- Problem statement is documented.
- Goal statement is documented.
- SIPOC is provided.
- CTQ/CTB list is provided.

Gaps

- Project charter is not confirmed (missing user confirmation).
- High-level benefit estimate is missing.

What to fix next (ordered)

- 1. Confirm project charter setup (checkbox) before finalize.
- 2. Add benefit estimate (type + order of magnitude).

Risks if proceed

- Proceeding without fixing critical gate items will invalidate later phases.
